# EDUCATIONAL INTERNET SITES THAT PRAIRIE VIEW STUDENTS USE

These are all free sites that the student should be able to access at home and have some fun practicing educational skills. There is also a link to this page on Prairie View's web page.

www.compasslearningodyssey.com                    (all grades K-5$^{th}$ grade)

This is the main site that students use at Prairie View. Most of the lessons on this site are geared towards what the students needs help in. When the students take the Acuity test; assignments are assigned according to their scores. Students may access this site from home and may work on the assignments. Their user name and password is their cafeteria number and the name they enrolled at GCS with. An example of this is 123Debra, 123Deb would not work because it has been shortened. I would like to encourage you to sit down with your child and look at this site. Please check the System Requirements before using this site to make sure the site works properly.

http://arcademicskillbuilders.com/                    (1$^{st}$ grade -8$^{th}$ grade)

This site has a variety of subjects and levels. Subjects are: Addition/Subtraction games, Multiplication/Division games, Fraction/Ratio games, Language Arts games and a State and Country Capital game. They can play with multiple players or as a single player. They can set up a Private game (we did Private games at school but they can set up Private games at home and just share it with school friends on line) or go on line and play with someone else. No information is exchanged and the only thing that shows up is their user name. On some of the games, they have the choice of what level and the speed that the game will play. There is link on this page where students can also play some of these games on their Wii.

coolmath4kids.com                    (K – 5th grade)

This site is loaded with all sorts of Math games. The students that have tried this site really enjoy the games. This site is the one that is requested the most.

pbskids.org                    (Preschool – 3$^{rd}$ grade)

Our lower grades use this site. It has games, videos, music, and coloring pages. By clicking on different icons, you get different subjects. Several of them help with sounding out words or learning what words are.

[www.starfall.com](http://www.starfall.com)                    (K-2nd grade)

This site is good for beginning readers. I would suggest that students in Kindergarten and 1st grade would enjoy this site. This site is all about letter sounds and reading books to the child. There are also games that go along with the stories. This site also has easy books for your child to read to you.

[http://freerice.com/](http://freerice.com/)                    (1st grade to 12th grade)

On this site students can change the subject and practice different things and different languages. Subjects are: Art, Chemistry, English Grammar and Vocabulary, Geography, Basic Math, Multiplication Tables, and different Languages. They will start out at the lower level and as they get the answers correct, the items will get harder. If they miss one, then it stays at the easier level for a short time.

Below you will find a list of other sites you might want your child to try.

[Multiplication.com - Interactive Games](#)
